Mitel AnyWare Hosted Voice

All-in-One Business Communications in the Cloud

With Mitel AnyWare, your business has its own phone system in the cloud, which means you have access to a multitude of easy-to-use, enterprise-class features for one low monthly fee. You get a complete suite of Unified Communications tools, business telephones, local and long distance calling – all for a budget-friendly, all-inclusive monthly subscription.

Everything a Phone System Should Be

- Available in all 50 states – Chesapeake partners with Mitel to serve as your single-point communications provider for all your locations.

- Mitel AnyWare is built on Mitel technology and can fully integrate with existing premises-based Mitel phone systems to unify all of your locations into a single voice network.

- Supports multiple user types and usage profiles with a range of Mitel IP phones. We design a custom solution to fit every user's unique needs.

- Mobile Integration links your office phone and your mobile device to provide a single number for calls and voicemail to support today's dynamic work environment.

- Cloud-based systems add reliability, redundancy, and disaster recovery capabilities. Mitel's hosted equipment is in redundant, geographically dispersed and secure data centers. If your office loses power or goes offline, the AnyWare Auto Attendant will manage your calls for you, and with mobile twinning, you will still receive all your calls on your mobile phone.

- If your needs ever outgrow AnyWare's capabilities, your Mitel 5300 series IP Phones will work with Mitel's on-premises platforms like the Mitel 3300 Communications Director.

- Enjoy peace of mind that comes from a hosted service designed, delivered, and managed by Mitel, a global leader in solving the communications challenges of businesses for over 30 years, and your local technology partner, Chesapeake, here for over 27 years.

The Right Solution for Your Business

We aren't pushing you toward a hosted solution because that's all we offer. We have a complete portfolio of premises-based solutions too. Rest assured that we will recommend the solution that will best fit your business today and tomorrow.

Everything your Business Communications should be – Guaranteed!

One bill to pay and one number to call

Many hosted providers deliver only a piece of your communications solution and leave it up to you to source important things [*like the phones you'll use]* or who will provide your Internet access. We deliver a complete solution that includes your phones, and we'll coordinate your Internet access if you need that too. The result is one company to deal with – and no finger-pointing.

Our personal touch gets you up and communicating quickly

We come to your site to install your service and train your users, so you are up and communicating quickly. During your first 30 days, when you are getting familiar with the service, and customizing features like the auto-attendant or ring groups, you'll have a dedicated contact to help you with any questions or requests. After that our Operations Center is available 24 x 7 so you can always get fast and efficient support.

Simple Plans, Affordable Pricing

Mitel AnyWare Standard – Includes a local telephone number, unlimited local, U.S. and Canada long distance calling, Unified Communicator Express, Mobile Twinning, Voice Mail to E-mail, Contact Dialing, Auto-Attendant and more, plus a diverse selection of phones and peripherals.
